Chief Executive Officer - Managing Director

Website: www.fenris.ltd

**FENRIS, s.r.o.** is a Granite Mining Company of **Kozárovická granite** (granodiorit) known for more than 100 years for building blocks, cube paving and sorted construction.

**Kozárovická granite** is mined around the village area of Kozárovice, which falls within the region of Central Bohemian (**Sázavský) plutonium**.

**Kozarovice Granite** is a very special kind of dark grey granite quarried in Czech Republic. This stone is excellent for Building stone, countertops, sinks, monuments, pool coping, sills, ornamental stone, interior, exterior and other design projects. It also **called Zula Kozárovice, Kozarovicka Zula, Kozarovice Gray Granite**. Our Granite are marketed worldwide and can be processed into Honed, Aged, Polished, Sawn Cut, Sanded, Rockfaced, Sandblasted, Bushhammered, Tumbled which all depends on the architectural design.

Since, the early **1900** and during the Communist era of the Soviet Union our granite was used in the construction of the **Vienna Parliament** and other construction notable government houses and palaces sites in Europe. In our Czech Republic we can see it in the **courtyard of Zvíkov Castle**, in **the Prague metro on the route "A" and "C"** as tiles or tiles, on the **staircase of the National Museum** and elsewhere major building. Granite has a very unique medium graininess of blue-gray with frequent with distinguishable gray-black enclosed sits 2-10 cm. It is a favorite design color for most outdoors use for building blocks, cube tiles and rough stone work. Favored by intetior decorators for its subtle original pattern which is used mostly as

cut tiles for floors of large area with numerous movement of people. It is a very sought-after quarry for Czech and foreign markets.

**Kozarovice Granite** 

## **About Fenris**

Our quarry has been in operation again under the European Union since mid-2015. **Fenris** began mining and production in full capacity in the early 2016. We have gone a long way and have survived generations of economic challenge of major proportion from pre Soviet Union era to the Soviet regime and today. Fortunately, a granite is a granite and that will not change in any given epoch in time.

**Fenris** has, always, been focused on the production of quality granite elements of gross stone production. We produce mostly granite cubes for structural architecture and for paving roads, extremes, hakaks, regulating and flowerstone. We also accommodate our customers with the production of certain atypical elements or dimensions. The stone is processed on quality technologies of the Czech company GESTRA CZ.

**For larger customers**, **Fenris** is able to provide up to 1000 tons of made cubes per month if necessary. Every year, we extract approximately 15 to 18,000 tons of quarry. At the beginning and end of the year, we also produce crushed material in basic fractures, i.e. 0 /32, 32/63, 63/125, as well as certified 0/20 sieves suitable for fillers.

Ownership: Corporate owned in Czech Republic
